Allowable Subject Matter

1. Claims 1-27 are allowed.

The following is an examiner's statement of reasons for allowance:

With respect to claims 1-4 and 9-12, the prior art alone or in combination does not teach the limitation of a solid electrolytic capacitor comprising: a current control means including a current control layer reversibly increasable in electrical resistance with over-current or excessive heat, and a pair of electrode members each in the form of a plate or foil and having the current control layer sandwiched therebetween.

With respect to claims 5-8 and 13-16, the prior art alone or in combination does not teach the limitation of a solid electrolytic capacitor comprising: a current control means including a current control layer reversibly increasable in electrical resistance with over-current or excessive heat, the current control layer being sandwiched between an electrode member and a cathode terminal member.

With respect to claims 17-27, the prior art alone or in combination does not teach the limitation of a solid electrolytic capacitor comprising a current control layer for controlling short-circuit current, the current control layer being prepared from an insulating polymer having electrically conductive particles admixed therewith and being sandwiched between a pair of electrode members.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Citation Relevant of Prior Art

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

a. Igaki et al. disclose a solid electrolytic capacitor and method for manufacturing the same.

b. Uenighi et al. disclose a solid electrolytic capacitor and method manufacturing.

c. Wada et al. disclose a solid electrolytic capacitor.

d. Hemphill et al. disclose a method of producing high quality oxide for electrolytic capacitor.

e. Sakata et al. disclose a method of manufacturing solid electrolytic capacitor.
